As a result, the *labeled* and *unlabeled* data are used to train a *semi-supervised* model. The *labeled* data is used to learn the *class* and *feature* distributions, while the *unlabeled* data is used to refine the learned distributions. This process is repeated until the model converges. The final model is then used to predict the *class* of new data points.

the first time in the history of the world, the people of the United States have been called upon to determine whether they will submit to the law of force, or the law of the Constitution. We have said to the world that we would not submit to force. We have said we would submit to the Constitution. We know how to submit to the Constitution. We know how to resist force. We are prepared to do either, and we are resolved to do one or the other.
